

# Cathay chooses CHAMP ULD management system

Hong Kong-based Cathay Pacific Airways and sister carrier Dragonair have opted for the web-based ULD Manager product from Luxembourg-based CHAMP Cargosystems.

The system will be used to locate and manage the activity of the carrier's ULD stock across a network of some 118 destinations in 37 countries.

ULD Manager is expected to be implemented at Cathay within three months, according to CHAMP. John Johnston, CEO of CHAMP Cargosystems, noted: "ULDs represent valuable assets; there are an estimated one million ULDs in use around the world with a collective value of over US\$1 billion.

"Major airlines, like Cathay, that move from legacy systems to the web-based CHAMP ULD Manager can achieve considerable savings on their overall ULD management costs."

Y H Huen, cargo service manager - ULD, Cathay Pacific, noted: "CHAMP's advanced web-based solution allows us to efficiently track our ULD equipment and to ensure sufficient stock is available in the right quantity and the right condition in the right place at the right time, giving us true network-wide control."

Johnston points to "considerable savings"
